Overall Rating Distribution

Consumer Distribution by Budget Level

Consumer Demand by Cuisine Type

This dashboard covers 138 consumers and 130 restaurants across 101 cuisine types, with an average overall rating of 1.20. Most consumers are young and are mostly students, and Mexican is by far the most preferred cuisine, with 97 consumers choosing it compared to 11 for American, the next closest. The following pages break down who these customers are, what affects their ratings, where the biggest market gap is, and what to look for when investing in a restaurant.

Consumer Distribution by Budget Level

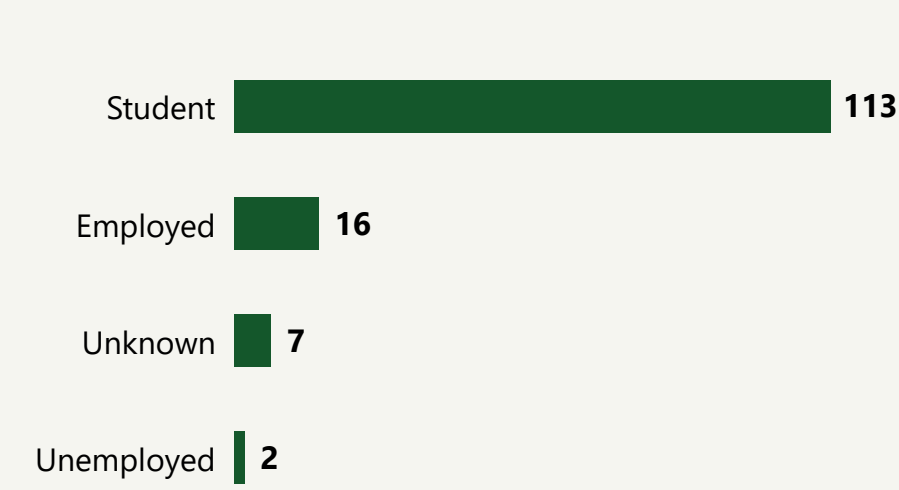

Consumer Distribution by Location

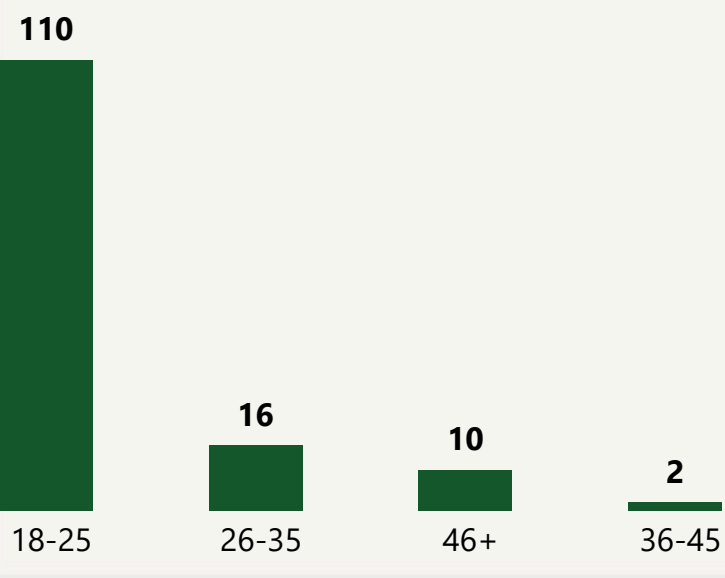

Yes, the data shows a clear bias. Most consumers are between 18 and 25 years old, mostly students, and fall under the Medium budget category. They are also concentrated in a few cities, mainly San Luis Potosi, with much smaller numbers from Ciudad Victoria, Cuernavaca, and Jiutepec. This means the data does not fully represent all restaurant customers in Mexico. It mainly reflects young, student, budget-conscious consumers from a narrow set of cities, and this should be considered when using this data to make decisions.

Consumer Preferences & Restaurant Performance

Understanding how cuisine preferences relate to restaurant ratings

Preferred Cuisine

Mexican

Best Restaurant

Restaurant Las Mañanitas

Avg Rating
(matched Cuisine)

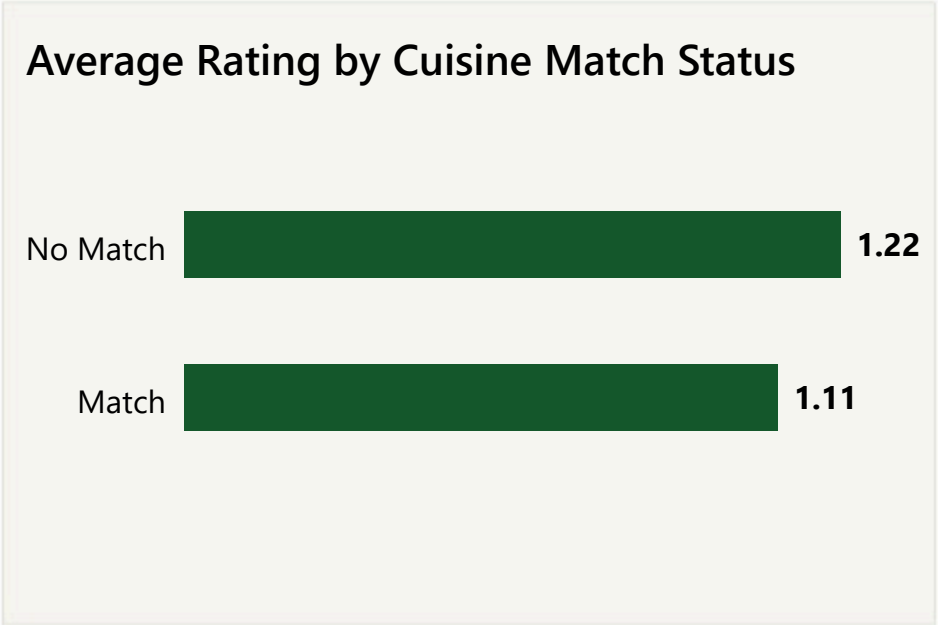

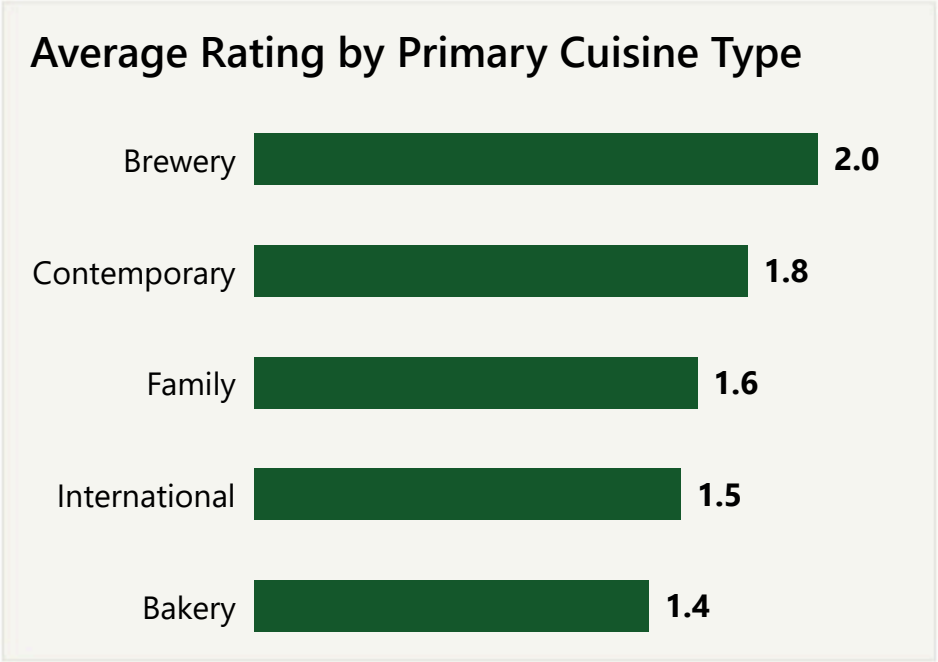

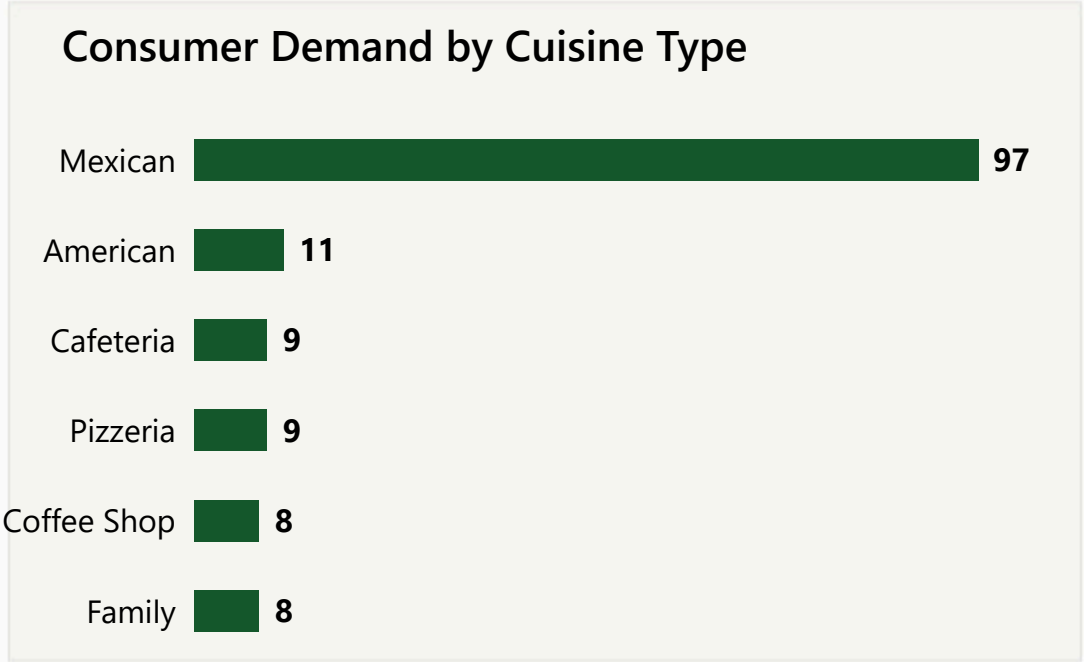

1.11

Cuisine Match Rate%

18.9%

Top Restaurants by Average Rating

Emilianos	2.0
Michiko Restaurant Japones	2.0
Restaurant Las Mañanitas	2.0
Cafe Punta Del Cielo	1.8

The highest rated restaurants, Emilianos, Michiko, and Las Mañanitas, all scored 2.0, and most of them fall under Brewery and Contemporary cuisine types, not Mexican, which is the most demanded. Interestingly, getting a customer's preferred cuisine does not improve their rating. Restaurants that matched a customer's preference scored 1.11 on average, while restaurants that did not match scored higher at 1.22. Also, only 18.9% of visits actually matched a customer's preferred cuisine. This shows that customer satisfaction is not really about getting their favorite food type. Something else, like food quality or service, likely plays a bigger role.

Demand vs Supply by Cuisine Type

Mexican	97	28
American	11	5
Cafeteria	9	9
Pizzeria	9	5
Coffee Shop	8	1
Family	8	2

● Sum of demand_count

● Sum of supply_count

Yes, there is a clear gap worth exploiting. Mexican cuisine has the highest demand, with 97 consumers wanting it, but only 28 restaurants currently serve it. This leaves a gap of 69, which is much higher than every other cuisine, where the gap is usually around 6 or 7. This makes Mexican cuisine the biggest and clearest opportunity in this market.

Avg Overall Rating

1.20

Average Rating by Price Category

Average Rating by Parking Availability

Average Rating by Alcohol Service

Average Rating by Franchise Status

The data shows that higher priced restaurants tend to perform better. High priced restaurants scored 1.26 compared to 1.07 for low priced ones. Restaurants with a full bar scored higher than those with no alcohol service, and restaurants with valet parking scored higher than those with public parking. Family cuisine came out as the best overall investment option because it balances both rating and market opportunity, even though Brewery rated higher on its own but lacks enough demand. Based on this, the best restaurant to invest in would be a high priced, Family cuisine restaurant with full bar service and valet parking, targeting employed customers.
